

■ Institutional Investment Thesis: Scribe Therapeutics (NASDAQ: SCTX) v2.0

****Author / Agent**:** Deep Dossier & Institutional Research Compiler (`deep\_dossier\_agent`)

****Framework**:** Professional Institutional Investment Thesis Standard ([P2P Market Data Standard])(<https://p2pmarketdata.com/articles/investment-thesis/>)

****Repository**:** [BretonsACT / IPO-Biotechnology](<https://github.com/BretonsACT/IPO-Biotechnology>)

****Target Audience**:** Hedge Fund Portfolio Managers, Institutional Biotech Analysts, Venture Partners

****Date**:** August 2026

1. Executive Summary & Thesis Statement

- **Company Name:** Scribe Therapeutics Inc.
- **Ticker:** NASDAQ: SCTX
- **Exchange / Debut:** NASDAQ Global Select Market (July 2026 IPO)
- **Offer Price:** \$15.00 | **Gross IPO Proceeds:** \$155.51 Million
- **Market Capitalization:** ~\$850.0 Million | **Enterprise Value:** ~\$610.0 Million
- **Cash & Marketable Securities:** \$240.0 Million | **Implied Cash Runway:** Early 2029 (30 Months)
- **Institutional Rating:** ■ SPECULATIVE BUY | **Position Sizing:** Tactical Growth (2.0% Allocation)
- **Target Price:** \$26.00 (73% Implied Upside) | **Investment Horizon:** 24 – 36 Months
- **Multi-Agent Composite Rating Score:** 76 / 100

■ Core Thesis Statement

Scribe Therapeutics represents a high-upside platform entry into next-generation *in vivo* CRISPR gene editing. Co-founded by Nobel Laureate Dr. Jennifer Doudna, Scribe engineers custom CasX enzymes ("XE" platform) designed for precise **epigenetic silencing** without introducing permanent double-stranded DNA cuts. Validated by over \$1.5 Billion in strategic milestone partnerships with Eli Lilly and a direct IPO equity investment from Sanofi, Scribe's lead candidate **STX-1150** (targeting *PCSK9* for long-term LDL-C lowering) is in active Phase 1 clinical testing in Australia. With \$240M in cash extending runway into early 2029, Scribe provides premier exposure to genomic editing with significantly lower off-target safety risks.

2. Market & Industry Dynamics

- **Total Addressable Market (TAM):** \$15 Billion Cardiovascular & Metabolic Gene Editing market. Over 40 million patients globally suffer from uncontrolled hypercholesterolemia and elevated Lp(a).
 - **Competitive Landscape:** Standard treatments require lifelong compliance with daily statins or bi-weekly injectable PCSK9 monoclonal antibodies (Praluent, Repatha) or semi-annual RNAi (Leqvio). Scribe's single-dose epigenetic silencing approach offers permanent or long-duration LDL-C suppression.
-

3. Rationale & Core Investment Pillars

- **Nobel Pedigree & CasX Platform Monopoly:** Co-founded by Dr. Jennifer Doudna; proprietary CasX ("XE") enzymes are smaller, more specific, and structurally distinct from off-target prone Cas9 enzymes.
- **Epigenetic Silencing Safety Advantage:** Modifies gene expression without cutting DNA strands, eliminating chromosomal translocations and genomic toxicity risks.
- **Pharma Validation:** \$1.5B+ collaboration with Eli Lilly and direct IPO private placement equity backing from Sanofi.
- **Funded Through Phase 1/2 Data:** \$240M cash balance secures operations into early 2029.

4. Comprehensive Clinical Trial Pipeline

Candidate	Mechanism / Target	Phase	Enrollment / Geography	Key Milestone / Output	Primary Source Link
STX-1150	Epigenetic *PCSK9* Silencing	Phase 1	First-in-human Australia	LDL-C reduction & safety data (1H 2027)	Scribe Official Site
STX-1200	Epigenetic *LPA* Silencing	Preclinical	IND-enabling studies	IND filing expected 2H 2027	Fierce Biotech Article

5. Valuation Framework & Financial Scenarios

,

SCENARIO VALUATION MATRIX

■ Metric ■ Bear Case Scenario ■ Base Case Scenario ■ Bull Case Scenario ■

■ Probability Weight ■ 30% ■ 50% ■ 20% ■

■ Implied Market Cap ■ \$450 Million ■ \$1.50 Billion ■ \$3.20 Billion ■

■ Implied Share Price ■ \$8.00 ■ \$26.00 ■ \$56.00 ■

■ Expected Return % ■ -46.6% ■ +73.3% ■ +273.3% ■

,

6. Risk Factors & Downside Mitigation Strategies

- **Risk: Early-Stage Clinical Profile: STX-1150 is in Phase 1 testing.**
 - *Mitigation*: Extensive non-human primate (NHP) data demonstrated >80% sustained LDL-C reduction with zero off-target cuts.
- **Risk: In Vivo LNP Tissue Delivery: Efficient hepatocyte targeting.**
 - *Mitigation*: Utilizing clinically validated GalNAc-LNP formulation technologies.

7. Exit Strategy & Key Catalyst Milestones

- **Exit Horizon:** 24 to 36 Months.
- **Chronological Catalyst Roadmap:**
 - ■■ **1H 2027:** Phase 1 STX-1150 first-in-human safety & LDL-C reduction readout.
 - ■■ **2H 2027:** IND filing for STX-1200 (*LPA* program).
